
BLACKBOARD: HOW TO ADD A YOUTUBE VIDEO USING THE VTBE

1. Click on the Mashup Tool menu at the right end of the third toolbar in the Visual Text Box Editor.
2. Click on the choice for YouTube Video.
3. In the window that appears, type your Search terms into the first text box.
4. Click the Go button, then wait. It may take up to several minutes for the YouTube search results to come back. Note that, should you already know what YouTube video you want, searching for the URL of the video will return only that video in the search results, which is really the most efficient way to locate specific videos.
5. Once you have located the video you want out of the search results, click the Select button below that video.
6. You may select whatever options you like for the display of the YouTube video. I strongly recommend keeping the default View of Thumbnail, and turning off the YouTube information listing.
7. Once you are satisfied with your settings, click the Submit button in the upper or lower right corner of the window.
8. Finally you can click the Submit button at the upper or lower right corner of the screen containing the VTBE.
9. You should now see a video playback thumbnail, which may be viewed by clicking the picture itself or the button below that says Watch Video.
