Four day field course explores the geologic processes and geographic factors that shape the coastal region of Southern California. Emphasis on coastal processes and landforms, coastal sediment resource management, oceanographic climate, geologic development of the Continental Borderland and Transverse Ranges, formation and development of oil and gas resources, geologic hazards and human impacts in the coastal zone.

This 4-day, 3-night trip begins in La Jolla and ends near Point Conception. Students must arrange their own transportation (carpooling required). Camping is involved. Camping fees, parking fees and transportation are paid by students.

Deadline for enrolling and submitting forms is February 27, 2015.

May be taken as GEOL195 (#31754) or GEOG195 (#31752) for 1 unit of credit.
